

Auto-Volume — Venue Setup Runbook

D'ARK EmQuartier · beta

Firmware v2.5.0
BMAsia

Dashboard	<code>soundtrack-auto-volume.onrender.com</code>	2.4 GHz WiFi only	(ESP32 can't see 5 GHz)
Admin login (BMAsia)	<code>av-NJ3B-UG9Q-2CA7</code> — internal, don't share	Soundtrack account	D'ARK EmQuartier (Premium)
Customer login (give them)	<code>HWYW-7XV4</code> + the dashboard link	Device	D'ARK EmQuartier · esp32-ccba9711a79c

SETUP AT THE VENUE — IN ORDER

1. **Place & power the device** where it hears the room (ideally near a speaker). Plug into USB power.
2. **Connect to D'ARK's WiFi** (2.4 GHz): tap the screen at boot for **"Change WiFi"** (or it shows a **AutoVolume-XXXX** network). On your phone, join **AutoVolume-XXXX** → a setup page opens (or visit `http://192.168.4.1`) → pick D'ARK's 2.4 GHz network → enter password → **Save**. The device reconnects on its own after this.
3. **Confirm online**: admin dashboard → **Devices** → "D'ARK EmQuartier" shows a **green dot · Online** with a live dB number moving.
4. **Check Soundtrack is playing** on the D'ARK zone (a player must be online and playing).
5. **Go live: Configure** → the D'ARK EmQuartier zone → flip the **toggle ON** (turns orange).
6. **Verify**: make noise / wait for a busy moment → the volume number climbs; quiet → it eases back down.

⚠ **Do NOT enable the zone before the device is physically at D'ARK** — it would change their real music from wherever the device is.

TUNING CHEAT-SHEET (ADJUST BY EAR)

- **Sensitivity** — how loud the room must get before volume rises. Start **Medium**. Maxes out too early in the evening? → **Low**. Barely reacts? → **High**.
- **Reactivity** — how fast it changes. Use **Slow** (smooth) or **Slowest**. **Avoid Fast/Fastest** in a venue — twitchy.
- **Volume Range** — **min** = sound when empty/quiet, **max** = sound when packed. Start **5–12**. Not loud enough over a crowd? raise max. Too loud when empty? lower min.

IF SOMETHING LOOKS OFF

- **Device "Offline" (red)**: check power + on D'ARK's 2.4 GHz WiFi. It auto-reconnects after blips; if stuck, tap screen → Change WiFi.
- ⚠ **Player offline badge**: D'ARK's Soundtrack player isn't playing → start playback in Soundtrack. Volume can't change while it's offline.
- **Online + dB moves but volume doesn't**: make sure the zone **toggle is ON** and the player is online.
- **Volume jumpy**: set Reactivity to **Slow / Slowest**.

HAND TO THE CUSTOMER

Link: `soundtrack-auto-volume.onrender.com` · Access code: `HWYW-7XV4`. They see **only their zone** — can tune Sensitivity / Reactivity / Volume Range and pause anytime. They cannot see any other account.
